

## life of brian /4/ **getting better all the time**

\_\_\_\_\_ more I talked about it, the \_\_\_\_\_ I **wished I could build** my \_\_\_\_\_ autogyro.

Timo asked me what I thought I would do with it.

"You really \_\_\_\_\_ with some stupid questions," I told him. I did have a special \_\_\_\_\_ in \_\_\_\_\_, though. I've \_\_\_\_\_ my **amateur radio license** for a couple of years now. My dad isn't paid very well in his job and we don't have enough money for \_\_\_\_\_ radio equipment. So I build my own. I started building radio equipment **a long time ago**, and I've been getting better at it all the time. I really think I'm pretty good \_\_\_\_\_ it \_\_\_\_\_ now.

\_\_\_\_\_ people don't understand that amateur radio operators can sometimes get in \_\_\_\_\_ with people on the other side of the world. Once I communicated with **a guy in Africa** \_\_\_\_\_ no more power than you have in your pocket radio. Code \_\_\_\_\_ it easier to contact far-away stations. The signal's always easier to hear than a \_\_\_\_\_ voice.
